MICA Version 3.50 Release Notes
December 6, 2007

New Features Added:
1. Microsoft Windows VISTA Friendly – Previous versions of MICA would run under the Vista operating system as administrator only. Now this is no longer necessary.
2. Added the database folder indication on the main toolbar. Also, double clicking on the database folder will allow you to change it.
3. Added the capability to save graphs in files in a batch mode using a Composite well.
4. Added expense calculations for lease use gas, and shrinkage in the Economic Input form.
5. Added a multiplier to the Base Prices. For example, this permits setting up a Base Price in $/MMBTU units. Then the multiplier can be used to calculate the price as $/MCF.
6. Added a cumulative water cut graph item.

Errors Corrected:
1. A calculation for the number of days in a month was incorrectly assigning 30 to October and 31 to November.
2. Corrected the problem of the Graph Annotations not being saved properly in the graph template.
3. Corrected the problem of the ownership interests sometimes not being retrieved properly from XMZ files.
